## EXECUTIVE SUMMARY

The overall dropout rate continued to decline in 2000-01 for the Wake County Public School System (WCPSS). The grades 7-12 dropout rate was 2.4 percent, the lowest since the state of North Carolina and the WCPSS began reporting dropouts in 1992, using federal standards. Since 1994-95 the gap between the grades 7-12 dropout rates for Black students and White students has decreased from 4.3 to 2.1 percentage points.

The largest number of dropouts has always occurred at the high school level. Of the 1,038 dropouts in the WCPSS for 2000-01, 1,024 (98.7%) were in grades 9-12. The WCPSS high school dropout rate decreased from 5.5% in 1995-96 to 3.7% in 2000-01 (see Figure 1). The WCPSS high school dropout has been lower than the rate for North Carolina and paralleled the trend of a decreasing rate of dropouts since the state began reporting high school dropout rates in 1998-99.

**Figure 1**  
**North Carolina and WCPSS Dropout Rate for**  
**Grades 9-12 from 1996 to 2001\***

Number of WCPSS dropouts  
for 2000-01 = 1,024

\*Beginning in 1998-99 students transferring to community college GED programs were counted as dropouts. 1998-99 was the first year that the state reported grades 9-12 dropout rates.

There were a number of significant findings related to grade level, race/ethnicity, gender, students' participation in special education programs, and free/reduced lunch status.

**Grade Level.** Each year since 1991-92, the largest number of dropouts has been in the ninth grade (371 in 2000-01). Thirty-six percent of all high school dropouts in 2000-01 were ninth grade students. These results are not surprising given that the ninth grade membership is the highest among the high school grades. The ninth grade, however, also has the highest dropout rate of any grade at 4.3 percent.

Age. About 87% of dropouts in 2000-01 were age 16 or older. The percentage of students dropping out at age 15 or 16 has declined slightly over the last six years, while the percentage aged 17 and older has risen.

Race/Ethnicity. Among *high school dropouts*, White and Asian students had the lowest dropout rates (2.7% and 1.3% respectively) and both were substantially lower than the rates for Black students (6.1%) and Hispanic/Latino students (7.2%).

Gender. *High school* males had a higher dropout rate than females (4.3% vs. 3.1% respectively). The high school dropout rates for males and females varied widely by ethnic group. White males had a dropout rate of 3.2% compared to 7.0% for Black males and 8.4% for Hispanic/Latino males. The pattern was similar for female dropouts (2.2% for White females, 5.3% for Black females, and 6.0% for Hispanic/Latino females).

Reason for Dropping Out. The primary reason for dropping out for all students was attendance (73.0% for females and 61.3% for males), followed by academic problems, and failure to return to school following long-term suspension. Academic problems were given as a reason for White students dropping out more often than it was for Black students or Hispanic/Latino students. Failure to return to school after long-term suspension was reported for 9.0% of male dropouts compared to 3.3% for females. This discrepancy was greatest among Black female and male dropouts. One finding of this report is the need to study the impact of long-term suspension on students' returning to school. The impact could be better understood by examining what happens to long-term suspended students who dropout and long-term suspended students who return to school. In the meantime, interventions with long-term suspended male students may need to be given a priority to ensure they return to school.

Retention. About 40% of high school dropouts had been retained in high school; about 27% were retained once, and 13% were retained twice or more. Female dropouts were less likely to have been retained (36.1% retained) than male dropouts (44.8%). Black female and male dropouts had the highest rates, among the three largest ethnic groups, of being retained twice or more in high school prior to dropping out.

Special Education Status and Type of Service. Students with disabilities had a dropout rate about twice that of students without disabilities (7.0% vs. 3.2% respectively). Unlike the overall dropout rates and the dropout rates for students without disabilities, female students with disabilities had a higher dropout rate (7.7%) than male students with disabilities (6.8%). Students with disabilities who were served in a regular classroom, both male and female, had the lowest dropout rate among students with disabilities. As the level of need for special services increased from regular classroom to resource services to self-contained classroom, the dropout rate also increased. The proportion of high school dropouts that had disabilities (25.5%) was almost twice the proportion of students with disabilities in the total high school membership in September of 2001 (13.1%). The biggest differences were among students who were behaviorally/emotionally handicapped, with 5.9% of high school dropouts having this disability compared to just 0.9% of high school students in membership in September of 2001.

Socioeconomic Status. *High school* students who were eligible for free or reduced-priced lunch had a lower dropout rate (2.8%) than students not eligible for free or reduced-priced lunch (3.8%). This was true of males, but not females. These results were contradictory to expectations. These results may be misleading because high school students often choose not to participate in the lunch program for a variety of personal reasons. Consequently, these results are an underestimate of the students coming from low-income families. More in-depth research would be required to better understand these results.

The WCPSS continued to have dropout rates below other comparable urban school systems in North Carolina. The rates by high school varied considerably, however, and individual school rates fluctuate from year-to-year due to the relatively small change in numbers of students dropping out in each school.

# **ANNUAL PROGRESS REPORT ON STUDENTS WHO DROP OUT 2000-01**

## **INTRODUCTION**

### **Determining Who Is A Dropout**

One of our most important educational goals is to keep young people in school and ensure that they graduate from high school. Determining who is a dropout, however, is a challenging issue. Some conventions for counting make the dropout rate appear larger, while others make it appear smaller. Some people advocate reporting dropouts by graduating class (i.e., a cohort rate), while others advocate reporting an annual rate. To date, reporting an accurate cohort dropout rate has not been possible because of the limitations of state and federal data systems. For this and other reasons, North Carolina and the U.S. Department of Education adopted an annual method of reporting dropout rates. Beginning with reporting for the 1991-92 school year, the state of North Carolina adopted standards for counting dropouts that, with only minor differences, follow the National Center for Educational Statistics Common Core of Data definition for reporting dropouts throughout the United States. Consistency is important in order to make reports comparable across districts and states in any given year as well as across time. Although this is the goal, it is not always possible. Changes or differences in counting conventions are explained in this report to avoid confusion.

For 2000-01, the Wake County Public School System (WCPSS) defined a dropout as a student who:

1. was enrolled in school at some time during the reporting year;
2. was not enrolled on the 20<sup>th</sup> day of the subsequent year;
3. did not graduate from high school or complete a state or district-approved educational program; and
4. did not meet any of the following exclusions:
  - transfer to another public school district, private school, home school, or state/district-approved educational program (this does not include transfer to a community college to obtain a GED);
  - temporary absence due to suspension or school-approved illness; or
  - death.

Standard practice is to report the dropout rate for all students who drop out from the seventh grade through the twelfth grade. Yet for some purposes, it is only the high-school dropout rates (grades 9-12) that are of interest. WCPSS reports both the grade 7-12 and the grade 9-12 dropout rates.

Beginning with the 1997-98 school year, state law required that the North Carolina Department of Public Instruction not include students who were expelled from school in

the reported dropout rates. This convention differs from the convention used by the National Center for Educational Statistics.

During the mid-1990s, the North Carolina Department of Public Instruction counted dropouts using another counting convention that was different from that used by the National Center for Educational Statistics.<sup>1</sup> In North Carolina, a student who dropped out of school during a school year was not counted as a dropout for that year if the student had dropped out in a previous school year and then returned to school. The national standard is to count such students as dropouts. All agencies reporting North Carolina and WCPSS dropout rates now report all students who dropped out in the reporting year regardless of whether they dropped out in previous years. The inclusion of students who had dropped out in previous years was called the “duplicated” dropout rate, while rates based on first time dropouts only were called “unduplicated” dropout rates. The difference between the duplicated and unduplicated dropout rates was always very small as very few students fit this definition.

Beginning with the 1998-99 school year, the North Carolina Department of Public Instruction began to require that students who left school before high school graduation in order to go directly to a community college GED program to be counted as dropouts. Previously, such students had been counted as transfer students since it was assumed they were continuing towards graduation. This change was the likely reason the 1998-99 dropout rates for WCPSS showed a noticeable increase that broke a decreasing trend of several years.

Beginning with the 2000-01 school year, dropout rates are included as part of North Carolina’s school-based accountability program (also known as the ABCs of Education). The dropout rate used for ABCs school accountability is a modification of the standard dropout rate to exclude: 1) long-term suspension students; 2) expelled students; and 3) students incarcerated in an adult facility. This modified dropout rate is referred to as the ABCs dropout rate. These adjustments were made so that schools would not be penalized for taking action necessary to ensure that schools are safe. For school accountability, the ABCs dropout rate for the current year is compared to the average of the two previous years to see if there is an improvement (i.e., a decrease) in the ABCs dropout rate. Inclusion of dropouts in the ABCs accountability program raises the stakes for schools in regard to dropouts. The intent is to make schools work harder to keep students in school and to graduate. This policy may also affect how hard people work to track down what happened to former students and to determine precisely whether or not they should be counted as dropouts.

The ABCs dropout rates are not reported here. However, the use of high school dropout rates for ABCs accountability purposes shifts the focus from the grades 7-12 dropout rate to the grades 9-12 dropout rate. In contrast to past reports, the high school (grades 9-12) dropout rate will be more prominently featured in this and future reports. However, to

---

<sup>1</sup> “NC Dropout Rates Released for 1998-99 year.” Public Schools of North Carolina. January 2000. [www.dpi.state.nc/news/99-00/020100.html](http://www.dpi.state.nc/news/99-00/020100.html)

ensure continuity with the past, tables showing trends will continue to display the grades 7-12 dropout rates. Not surprisingly, the dropout rate for grades 7-12 is lower than that for grades 9-12 because few students drop out before the ninth grade. It should also be remembered that these rates do not include the few students who are reported as dropouts in earlier grades.

### **The Dropout Rate Calculation**

The number of students who are counted as dropouts annually must be compared to the total number of students in order to calculate a dropout rate. The method used in North Carolina is based on the total student membership<sup>2</sup> on the twentieth day of the each school year, because that is the time when membership tends to stabilize for the school year. In the WCPSS, which has experienced continuous growth for several years, membership tends to be higher each year. In other school systems, membership may tend to decrease. In order to compensate for changing membership due to demographic trends, the state specifies the use of *a rolling average* across two years. For example, total membership on the twentieth day of school in 2000-01 is added to the total membership on the twentieth day of school in 2001-02, and is then divided by two. Finally, the number of dropouts during the year is added to complete the calculation. The rolling average adjusts for demographic change during the 2000-01 school year. Accordingly, the formula for the 2000-01 dropout rate is:

$$\frac{\text{Number of Dropouts}_{2000-01}}{(\text{Membership}_{2000-01} \text{ 20th-Day} + \text{Membership}_{2001-02} \text{ 20th-Day})/2 + \text{Number of Dropouts}_{2000-01}}$$

For example, the WCPSS rate calculation for grades 7-12 for 2000-01 was:

$$\frac{1,038}{(41,015 + 43,309)/2 + 1,038} = 0.024 \text{ or } 2.4\%$$

---

<sup>2</sup> Membership as reported in North Carolina public schools refers to a student being enrolled, regardless of being present or absent, for a given date or period of time. This term should not be confused with the term enrollment, which refers to the total number students enrolled throughout the school year. Enrollment is not reduced by transfers, withdrawals, or other reasons a student may no longer be in membership.

## DROPOUT TRENDS

The grades 7-12 dropout rate for 2000-01 in the Wake County Public School System (WCPSS) was 2.4 percent, the lowest since the state of North Carolina and the WCPSS began reporting dropouts according to federal standards for the 1991-92 year. In the WCPSS, there were 1,038 students counted as dropouts. The WCPSS dropout rate has declined from 1994 to 2001, and has remained below the dropout rate for North Carolina since 1995-96 as shown in Figure 2.

**Figure 2**  
**North Carolina and WCPSS Dropout Rate for**  
**Grades 7-12 from 1992 to 2001**

NOTES: • 1991-92 is the first year in which dropouts were reported based on federal guidelines, and the first year using the SIMS Dropout Data Summary (DOP-9).

• Beginning in 1998-99 students transferring to community college GED programs were counted as dropouts.

The decline in the dropout rate was interrupted in 1998-99, the year that students going directly to community college GED programs began to be counted as dropouts. The decline in the dropout rate resumed during the 1999-00 school year.

### Dropout Rate by Grade Level

The greatest percentage and number of students dropping out, except by a very narrow percentage in 1993-94, has been in grade 9 (see Figure 3). The dropout rate is also highest in the ninth grade. This consistent pattern from year to year may occur because at the ninth grade level many students reach 16 years old and school attendance is not legally required after reaching this age. In addition, the first year of high school brings many changes in requirements and processes, which are a significant challenge to many

students. For the most part, the dropout rate in each grade decreased steadily from 1993-94 to 1997-98. The trend toward a steady decline in dropout rates in each grade continued from 1998-99 to 2000-01 following an increase in 1998-99 that was likely due to the change in counting transfers to community college GED programs as dropouts.

\*Beginning in 1998-99 students transferring to community college GED programs were counted as dropouts.

## Dropout Rate by Ethnic Group

The WCPSS dropout rates for grades 7-12 for ethnic groups parallel the trends of the overall dropout rate (see Figure 4). The increase in dropout rates in 1998-99, likely due to the change in reporting transfers to community college GED programs as dropouts, was more significant for Black and Other students than for White students. Since 1994-95 the gap between the dropout rate for Black students and White students has decreased from 4.3 to 2.1 percentage points.

**Figure 4**  
**WCPSS Dropout Rates for Grades 7-12**

1995-96	570	574	53	1,197
1996-97	470	499	46	1,015
1997-98	464	536	79	1,079
1998-99	554	561	111	1,226
1999-00	466	541	108	1,115
2000-01	430	510	98	1,038

## Number of Dropouts by Age

The greatest number and percentage of students dropping out were age 16 or older. By North Carolina law, children are required to attend school through age 16. For the past six years, about 85% of students dropping out in grades 7-12 have been age 16 or older. The number and percentage of students dropping out at age 15 or 16 has been declining slightly over the last six years (see Figure 6). The number of students dropping out at ages 17 and older was also generally declining, but represents an increasing percentage of all dropouts (see Figure 7). This trend is consistent with the declining dropout rate for grades 7-12 and the goal of keeping students in school as long as possible.

**Figure 6**  
**WCPSS Percentage of Total Dropouts by Age**  
**Grades 7-12**

**Figure 7**

\*Beginning in 1998-99 students transferring to community college GED programs were counted as dropouts.

## HIGH SCHOOL DROPOUTS

While North Carolina dropout rates have been reported for students in grades 7-12 for the past decade, the largest number of dropouts has always occurred at the high school level. Of the 1,038 dropouts in the WCPSS for 2000-01, 1,024 (98.7%) were in grades 9-12. The WCPSS high school dropout rate has decreased from 5.5% in 1995-96 to 3.7% in 2000-01 (see Figure 8). The WCPSS high school dropout rate has been lower than the rate for North Carolina and paralleled the trend of a decreasing rate of dropouts since the state began reporting a high school dropout rate in 1998-99.

**Figure 8**  
**North Carolina and WCPSS Dropout Rate for**  
**Grades 9-12 from 1996 to 2001\***

Number of WCPSS dropouts  
 for 2000-01 = 1,024

\*Beginning in 1998-99 students transferring to community college GED programs were counted as dropouts. 1998-99 was the first year that the state reported grades 9-12 dropout rates.

### Number of Dropouts by Grade Level and Age

As reported above, the greatest number of dropouts occurs at ninth grade. Ninth grade is also the high school grade with the largest membership. The greatest number of dropouts was 17 years old. Typically, the greatest number of dropouts has been 16 years old. As mentioned earlier, this shift toward slightly older age at the time of dropping out is consistent with the trend of decreasing dropout rates and the goal of keeping students in school longer. As Figure 9 shows, a large majority of ninth and tenth grade students were one or more years older than the typical age of their peers (73.5% and 60.6% respectively). Most likely, students dropping out who were older than their peers have been retained at one or more grades during their school experience. Unfortunately data on a student's retentions across his or her entire school experience are not available for this report.

**Figure 9**

**Ethnic and Gender Results**

White and Asian students had the lowest dropout rates (2.7% and 1.3% respectively) and both were substantially lower than the rates for Black students (6.1%) and Hispanic/Latino students (7.2%), as shown in Figure 11. Males had a higher dropout rate than females. This was true for Asian, Black, Hispanic/Latino, and White students (see Figure 10).

**Figure 10**  
**WCPSS High School Dropout Rate by Ethnic and Gender Group 2000-01**

Female dropouts more often were making progress in school than males overall (see Figure 12). Making progress is defined as *not* being previously retained in high school or *not* dropping out due to academic difficulty. Hispanic/Latino male dropouts, however, had the highest rate of making progress among the three largest ethnic groups. Black male dropouts had the lowest rate of making progress among the three largest ethnic groups. Black female dropouts had a slightly lower rate of making progress than Hispanic/Latino and White female dropouts. It is not known if these patterns occur because some students drop out before they have academic problems, or because some students are more persistent prior to dropping out, or because of other factors that might result in some students being retained more often than other students. See Attachment 1 for data on all ethnic and gender groups.

**Figure 12**  
**WCPSS High School Dropouts' Making Progress\* by Ethnic and Gender Group**  
**2000-01**

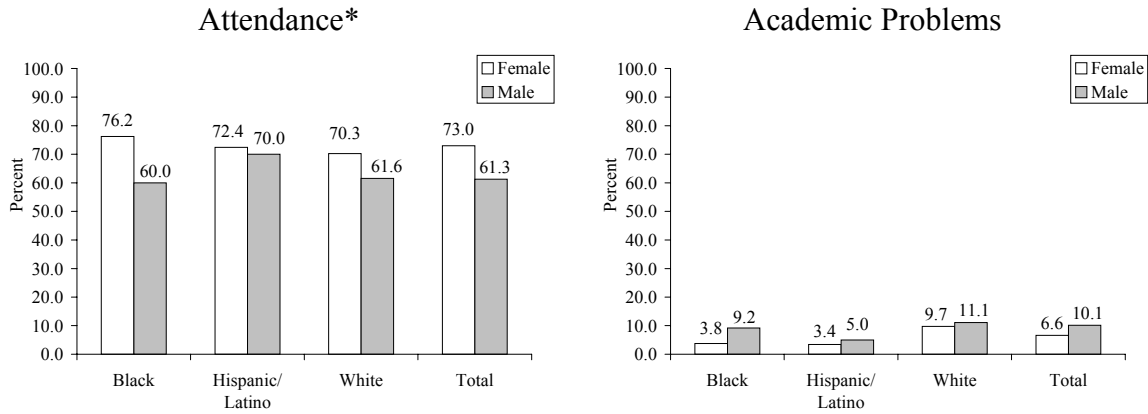

\* Progress is defined as a student who was *not* previously retained in high school or did *not* drop out due to academic difficulty.

The main reason given for students for dropping out was attendance. Approximately two-thirds of students dropped out due to attendance problems related to family, personal, school, or work reasons. Attendance, along with academic problems and failure to return to school after long-term suspension, account for 80% or more of the reasons cited by schools for students dropping out. This pattern was generally true for students across ethnic and gender groups (see Figure 13). Female students withdrew due to attendance problems more often than males. Compared to other ethnic groups, Black females much more often withdrew due to attendance than Black males (76.2% vs. 60.0% respectively).

Males somewhat more often withdrew due to academic problems than females. The differences between males and females among Hispanic/Latino and White students were

fairly small. Among Black students, males much more frequently withdrew due to academic problems (9.2%) than females (3.8%).

**Figure 13**  
**WCPSS High School Dropouts' Reasons for Dropping Out**  
**by Ethnic and Gender Group**  
**2000-01**

\*Attendance reasons include family, personal, school, and work.

**Failure to Return to School After**  
**Long-Term Suspension**

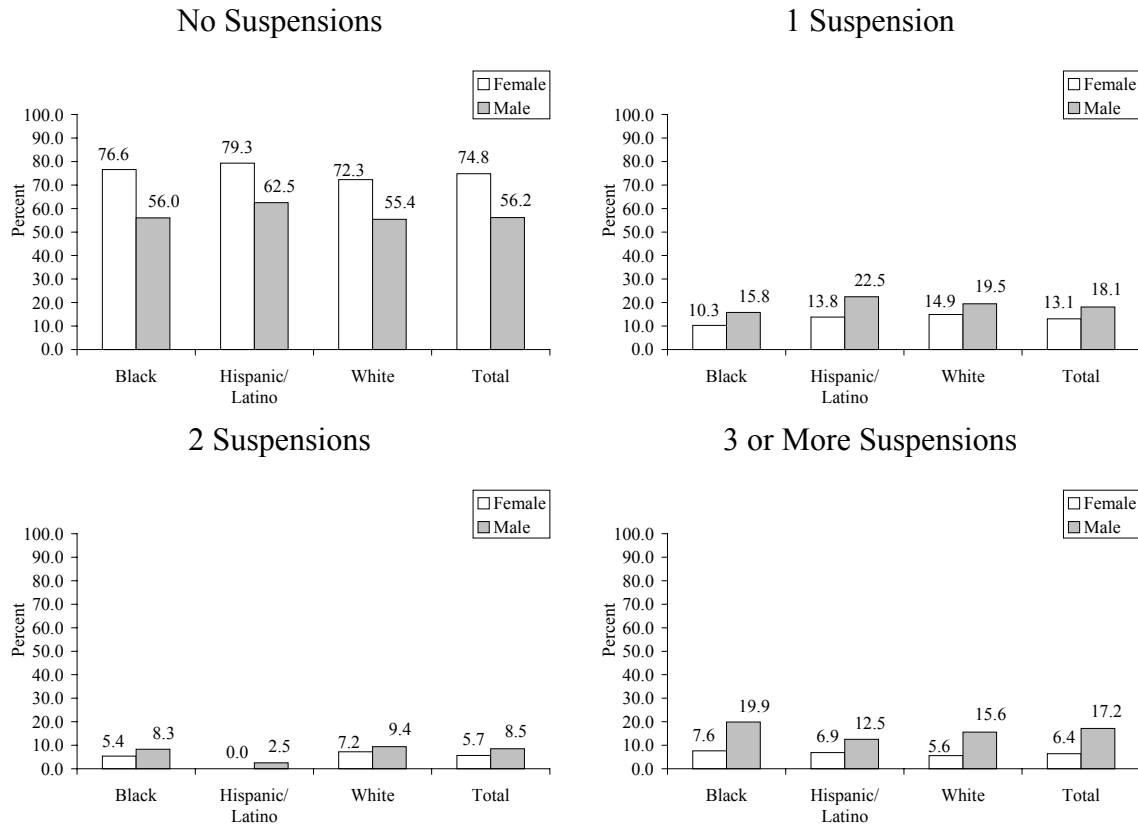

Failure to return to school following long-term suspension was given as a reason for dropping out almost three times more often for males than females. This difference, however, was largely accounted for by the difference between Black females and males (1.6% vs. 10.8% respectively). There was less than a one percentage point difference between Hispanic/Latino females and males. Failure to return to school after long-term suspension was cited for White males about twice as often as for White females.

Male dropouts were more likely to have been suspended than females as shown in Figure 14. Among the three largest ethnic groups, male dropouts had a rate of suspension that was 16% to 20% higher than females. Hispanic/Latino dropouts had the lowest rate of being suspended for their respective gender. Hispanic/Latino male dropouts had a slightly higher rate of having one suspension compared to Black and White males,

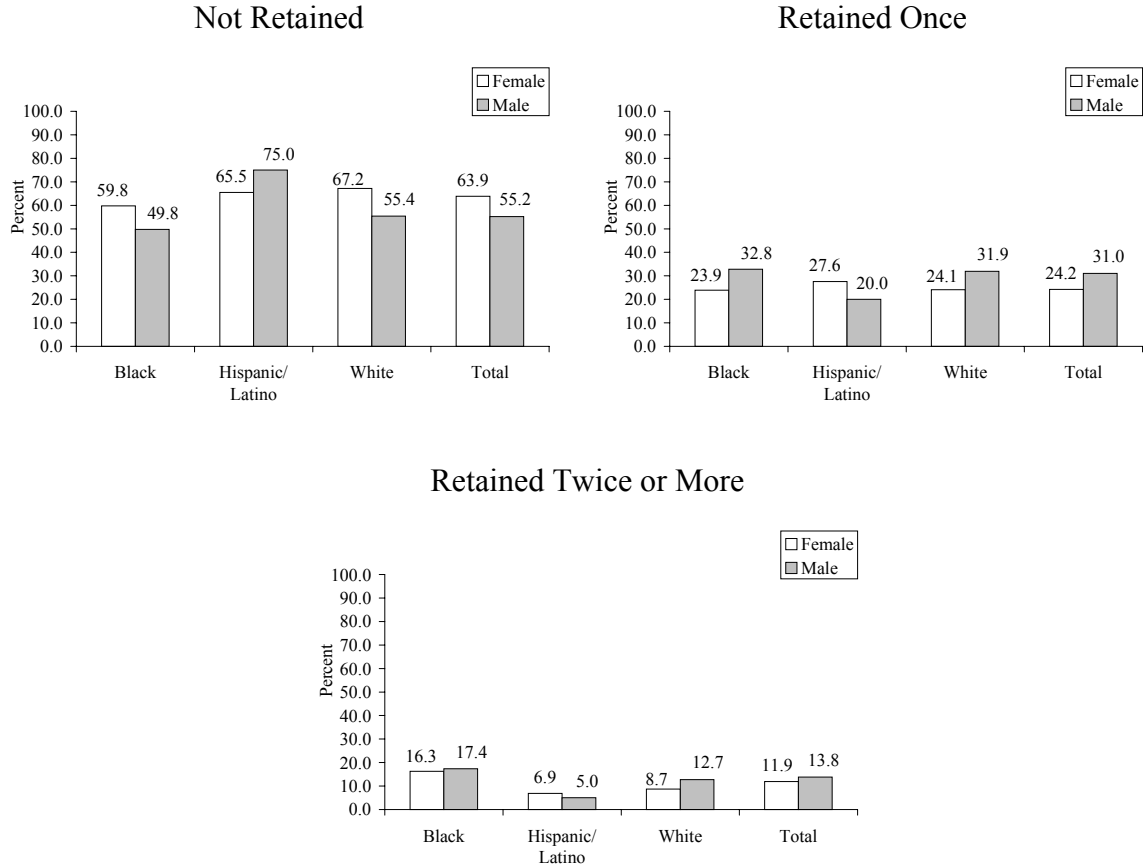

however. Black and White male dropouts had a slightly higher rate of being suspended three or more times. This difference between Hispanic/Latino males on one hand and Black and White males on the other may be because Hispanic/Latino students are less likely to engage in behavior that results in suspension or because they drop out before there are other incidents that might result in a second or third suspension.

**Figure 14**  
**WCPS High School Dropouts' Number of Suspensions by Ethnic and Gender Group 2000-01**

Female dropouts were less likely to have been retained while in high school than males (see Figure 15). Hispanic/Latino male dropouts had the lowest rate of high school retention among the three largest ethnic groups, however, and Black male dropouts had the highest rate. Black female dropouts had the highest rate of retention among the three ethnic female groups (Hispanic/Latino female dropouts were the lowest). Black female and male dropouts had about the same rate of being retained once as White female and male dropouts. Black female and male dropouts, however, had the highest rates of being retained twice or more among the three largest ethnic groups. Like suspensions, it is not known if these patterns occur because some students drop out before they have an opportunity to be retained (one or more times), or because some students are more persistent prior to dropping out, or because of other factors that might result in some students being retained more often than other students.

**WCPSS High School Drop Outs' Number of Retentions While in High School**  
**by Ethnic and Gender Group**  
**2000-01**

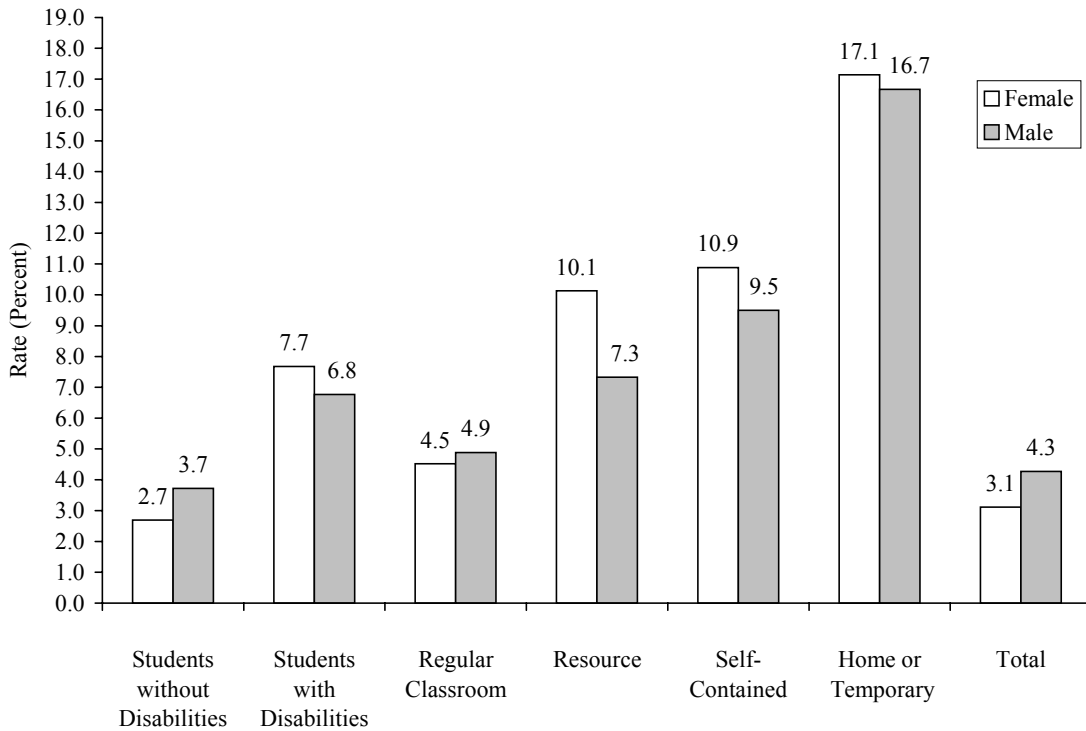

## **Students with Disabilities Results**

Students with disabilities had a dropout rate about twice that of students without disabilities (7.0% vs. 3.2% respectively). Unlike the overall dropout rates and the dropout rates for students without disabilities, female students with disabilities had a higher dropout rate (7.7%) than male students with disabilities (6.8%). The dropout rate for female students with disabilities was nearly three times that of female students without disabilities; the dropout rate for male students with disabilities was nearly two times that of male students without disabilities (see Figure 16).

Figure 16 shows that there were differences based on the type of service students received. Students with disabilities in a regular classroom, both male and female, had the lowest dropout rate among students with disabilities. Also, the dropout rates for female and male students in this category were nearly equal. Students with disabilities in a regular classroom are those that need the least assistance with their disability. The situation was different for students with disabilities receiving resource services (i.e.,

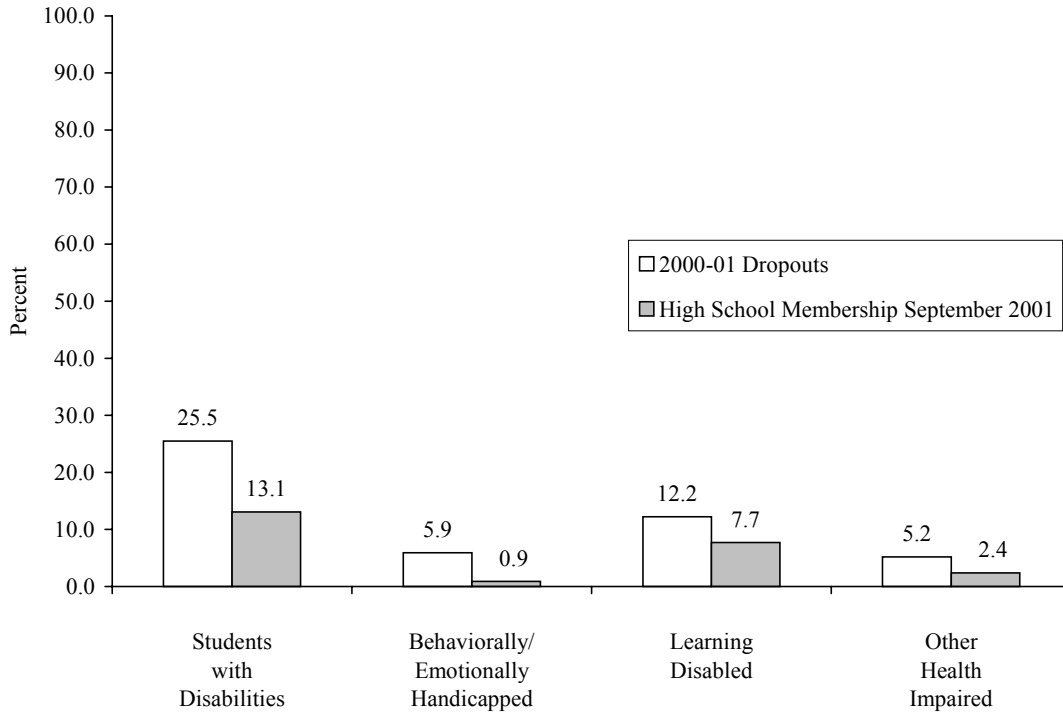

students who receive some or supplemental instruction from a special education teacher for part of the school day or week) or in a self-contained classroom with a special education teacher. Among students with disabilities receiving resource services, female students' dropout rate was nearly three percentage points higher than male students' dropout rate. The dropout rate for female students with disabilities receiving resource services was more than twice the rate for female students with disabilities in a regular classroom. This was also true when comparing female students with disabilities in a self-contained classroom with female students with disabilities in a regular classroom. Comparisons among males were only slightly better than the differences among female students with disabilities. Students with disabilities receiving services at home or on a temporary basis had dropout rates more than three times the rate of students with disabilities in a regular classroom.

**Figure 16**  
**WCPSS High School Dropout Rate by Disability Status and Type of Service**  
**2000-01**

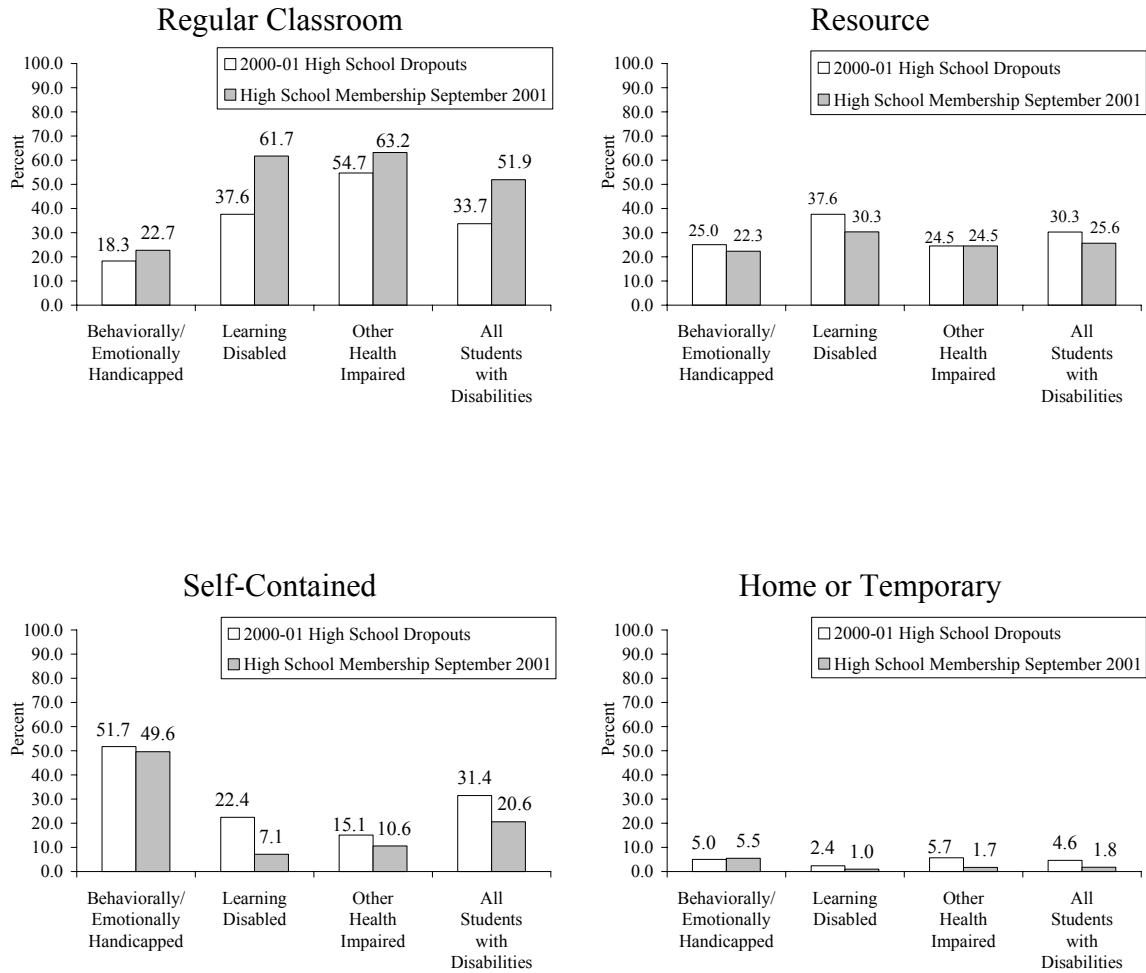

As shown in Figure 17, the proportion of high school dropouts who had disabilities was almost twice the proportion of students with disabilities in the total high school membership in September of 2001. The biggest differences were among students who were behaviorally/emotionally handicapped with 5.9% of high school dropouts having this disability compared to just 0.9% of high school students in membership in September of 2001.

**Figure 17**  
**WCPSS Percent of Students with Disabilities in the Three Largest Disability Categories: 2000-01 High School Dropouts Compared to High School Membership September 2001**

When comparing students by disability category and by the type of service, it appears that learning disabled students in a self-contained classroom were much more likely to drop out (see Figure 18). Of all students in high school with an identified learning disability, 7.1% were in a self-contained classroom compared to 22.4% of high school dropouts with a learning disability. High school dropouts identified as other health impaired (e.g., attention deficit disorder/hyperactive disorder) also had a somewhat higher rate of being in a self-contained classroom (15.1%) than all high school students (10.6%). The distribution across the four types of service for students who were behaviorally/emotionally handicapped was approximately the same for high school dropouts and for all high school students in membership in September of 2001.

**Figure 18**  
**WCPSS Percent of Students with Disabilities by Type of Service for the Three Largest Disability Categories for 2000-01 High School Dropouts and High School Membership September 2001**

**Free/Reduced Lunch Status Results**

Overall students who were eligible for free or reduced-priced lunch had a lower dropout rate (2.8%) than students not eligible for free or reduced-priced lunch (3.8%). This was true of males, but not females (see Figure 19). Unlike the overall results where male students had a higher dropout rate than female students, male students eligible for free or reduced-priced lunch had a lower dropout rate (2.5%) than female students eligible for free or reduced-priced lunch (3.1%). These results were somewhat surprising given that students eligible for free or reduced-priced lunch generally have lower academic achievement in middle school (see *2000-01 End-of-Grade Multiple-Choice Test Results* E&R Report No. 01.37) and are considered to be at greater risk for academic problems than students not eligible for free or reduced-priced lunch. Receiving free or reduced-price lunch is only a rough estimate of family income and socioeconomic conditions for students, however. These results may be misleading because high school students often

choose not to participate in the lunch program for a variety of personal reasons. Consequently, these results are an underestimate of the students coming from low-income families. More in-depth research would be required to better understand these results.

**Figure 19**  
**WCPSS High School Dropout Rate by Free/Reduced Lunch Status and Gender Group 2000-01**

## Dropout Rates Among Comparable School Systems

High school dropout rates have been declining in the WCPSS and in North Carolina’s other urban school systems between 1998-99 and 2000-01. The high school dropout rate for the WCPSS remained below that of other urban North Carolina school systems (see Figure 21). Durham County’s dropout rate declined more rapidly over the last two years than other urban North Carolina school systems. Guilford County had the largest one-year decrease in the dropout rate from 1999-00 to 2000-01.

**Figure 21**  
**Grades 9-12 Dropout Rate for WCPSS and Selected North Carolina School Systems from 1999 to 2001**

## Dropout Rate By High School

About half of the WCPSS comprehensive high schools had a decrease in the dropout rate from 1999-00 to 2000-01. Over time, most high schools experience slight increases and decreases in the dropout rate (see Figure 22). These fluctuations are due in part to the small number of students dropping out in most schools, where small increases or decreases in the number of students dropping out can significantly change the dropout rate. Only three high schools—Broughton, Garner, and Millbrook—had declines in the dropout rates over the two years since the state of North Carolina began counting students transferring to community college GED programs as dropouts in 1998-99. More detailed information about dropouts by high school with comparisons to the WCPSS can be found in Attachment 2.
