

ANALYSIS OF 2008-09 WCPSS SAT SCORES

David Holdzkom and Kevin Gilleland

1. In 2008-09, students in Wake County Public Schools (WCPSS) posted average SAT scores of 548 in mathematics, 526 in critical reading, and 511 in writing. The combined score for mathematics and critical reading was 1074, with a total average score of 1585. The combined mathematics and critical reading score was 15 points higher than the combined score for 2007-08. The average combined mathematics and critical reading score for seniors in North Carolina was down one point from 2007-08 at 1006. On average, across the nation, the score also slipped one point from 1017 to 1016.
2. Since 1990, the average SAT combined score (mathematics and verbal/critical reading) for WCPSS students has moved from 999 to 1074. The average score for North Carolina has moved from 948 to 1006, while the national average score has gone from 1001 to 1016. Thus, WCPSS students have added 75 points to their combined score over the period, while state students have added 58 points and nationally, students have added 15 points.
3. In 1990, WCPSS trailed the national average by 2 points. By 2009, WCPSS exceeded the national average by 58 points. Similarly, in 1990, WCPSS exceeded the state average by 51 points. In 2009, the difference was 68 points.
4. Since 1990 students across the nation, the state, and the district have improved scores on the mathematics portion of the test faster than they have the verbal/critical reading portion. While the nation added 14 points to the mathematics score and only 1 point to the critical reading score, the state added 41 points to their mathematics score and only 17 points to the critical reading average. Students in WCPSS added 50 points to the mathematics score and 25 points to the reading score average.
5. In March 2006, the Educational Testing Service re-introduced the writing portion of the SAT. WCPSS students scored on average 12 points over the nation and 24 points over the state average on this test in 2007-08. In 2008-09, these numbers increased so that WCPSS students on average scored 18 points more than the national average and 31 points more than the state average.
6. For the first time in 2008-09, participation rates in WCPSS were below 70%. Indeed, the rate fell by 9 percentage points as compared with the year before. At the state level, participation was steady at 63%, the same as in 2007-08. Nationally, there was a one percentage point increase in participation from 45% in 2007-08 to 46% in 2008-09. All of the data described above may be found in Table 1, Figure 2, and Figure 3 below.

7. Table 2 shows the top 12 average scores for North Carolina school districts. The score shown is the total score (mathematics plus critical reading plus writing). The number of test-takers included in the calculation is also shown. From this table, it may be seen that WCPSS students had the 4th highest average score in the state and the largest number of test-takers by far.
8. Compared with other large school districts in the state, WCPSS had both higher average scores and higher participation rates. As may be seen in Table 3, all districts in the cohort experienced lower participation rates in 2008-09 than in the prior year and half of the cohort (Durham, Guilford, and Forsyth) had lower average scores in 2008-09 than in the prior year. Students in Charlotte-Mecklenburg and Cumberland school districts posted 1 and 3 point gains, respectively.
9. A comparison of the average performance of male and female students in the district shows that, when considering the mathematics and critical reading portions combined, female students continue to lag male students. However, between 2007-08 and 2008-09, female students improved their score on average by 20 points, whereas male students posted an 8 point gain. Over the long term, female test-takers have gained, on average, 29 points while male students have gained 12. See Figure 4 for more detailed information.
10. Figure 5 shows the disaggregation of SAT scores by race/ethnicity over time. In all three categories—White, Black/African American, and Hispanic/Latino—WCPSS students continue to outperform their state and national counterparts. Moreover, the improvement rate for WCPSS students is much faster than for their comparison groups. For example, while WCPSS Black/African American students improved by 21 points between 2004 and 2009, there was only an 8 point improvement for state Black/African American students over the same period and, nationally, there was actually a decline of 2 points. White students in WCPSS, the state and the nation showed a more positive, but similar, pattern. WCPSS Hispanic/Latino students showed a large gain (38 points) from 2004 to 2009, while the average score for state and national Hispanic/Latino students actually lost 1 and 2 points, respectively.

In summary, WCPSS students posted a very large gain on the SAT during 2008-09 as compared with prior performance, posting the largest average gain since 1992. Compared with the nation and the state, as well as with other large districts in the state, WCPSS has seen remarkable improvements for all ethnic/racial groups and for female test-takers. The one troublesome note remains the dropping participation rate, which mirrors the drop in other large districts in the state. While this drop may be, at least in part, a reflection of the local, state, and national economy, it should be monitored closely by principals, teachers, and counselors in our schools.

Note: There are 50 scores that NCDPI has included in Wake's SAT average from a now defunct high school, East Wake High, which result in slight variations in the WCPSS calculated score averages. Our report uses the data from College Board.

Cumberland	946	477	469	53.2	949	479	470	51.3

Notes: When the actual number of graduates was not known, participation rates reported by NCDPI are used. SAT participation rates reported by the College Board are based upon estimates of counts of graduating seniors compiled through national surveys. While the College Board rates are probably accurate at the state and national level, they are not accurate at the district and individual school level. The North Carolina Department of Public Instruction (NCDPI) uses 8th month twelfth-grade membership rather than actual numbers of graduates. Whenever the actual number of graduates is known, WCPSS uses that count to calculate participation rates, dividing the number of senior students who took the SAT by the size of the graduating class for the district and for each high school.
